

# Design That Delivers

## Custom Design that Works as Hard as You Do

You've built something real. You've put in the work, refined every detail, and created a product worth sharing. But somewhere along the way, "good enough" packaging stopped being good enough.

That's where M&M Industries comes in. We design packaging that performs—containers that protect, display, and tell your story before they're even opened.

From first sketch to final shipment, our U.S.-based team partners with you to create packaging built for your world—strong, smart, and unmistakably yours. Because your product deserves packaging that works as hard as you do.

## Beyond Packaging, We Design Performance

True custom design starts with solving the right problem. Whether you need to prevent leaks, streamline automation, or meet new regulations, our engineers build packaging that performs under pressure.

Our in-house design team delivers:

- **Structural Customization:** Shapes, stacking, venting, and sizing tailored to your product and fill line.
- **Functional Upgrades:** Ergonomic handles, secure lids, tamper-evident systems, and custom fitments.
- **System Compatibility:** Packaging engineered for your automation, labeling, and distribution.
- **Built-In Compliance:** FDA, DOT/UN, child-resistant, and senior-friendly solutions that meet industry standards.

Every design is thoroughly tested—because performance isn't optional.

**Our mission:** packaging that supports your operations, not the other way around.

## Sustainability that Sells

Custom design is the key to sustainable packaging. By integrating eco-conscious thinking into the design stage—not as an afterthought—we help brands reduce environmental impact without sacrificing performance or appearance.

Our team engineers packaging that supports sustainability goals by:

- Incorporating post-consumer recycled (PCR) content
- Creating lightweight designs that use less plastic and lower shipping emissions
- Ensuring recyclability and reusability through material selection and smart geometry
- Optimizing freight efficiency with stackable, space-saving shapes

Today's consumers care deeply about the footprint of the products they buy, and clear sustainability choices give them the transparency they increasingly expect—helping your brand stand out in a crowded marketplace. Through smart design and material innovation, M&M helps you meet these sustainability benchmarks while elevating your brand's overall marketability.

Better for the planet. Better for your business.

# Real Stories. Real Results.

Packaging with Purpose

## Brand Defining Decoration

Your packaging is the face of your brand—and how it looks matters. That's why M&M offers industry-leading decorating capabilities designed to deliver bold, durable, and beautiful packaging.

### In-Mold Labeling (IML)

Our premium option for full-surface, photo-quality graphics. Labels are fused directly into the container during molding, creating a permanent, seamless look that won't peel, scratch, or fade.

- 360° branding and billboard coverage
- High-resolution imagery and vibrant color
- Fully recyclable—no separate materials or adhesives
- Ideal for food, consumer, and industrial markets

### Heat Transfer Labeling

Perfect for vibrant, detailed designs that demand attention. Using heat and pressure, we transfer artwork directly onto the pail surface for crisp, durable graphics.

- High-definition color and sharp detail
- Resistant to wear, moisture, and chemicals
- Ideal for high-volume production and bold retail packaging

### Dry Offset Printing

The industry workhorse for efficiency and consistency. Ideal for spot-color graphics, offset delivers clean, reliable prints on cylindrical and conical containers.

- Quick setup, precise alignment
- Durable, fade-resistant finish
- Ideal for industrial, agricultural, and promotional use

Our decorating technologies make your packaging do more than hold your product—they sell it.

## Let's Design the Future Together

M&M Industries isn't just a packaging supplier—we're a design partner and problem-solving engine. With multiple U.S. and international patents, we push the boundaries of what plastic packaging can do. Every product is proudly American-made and engineered for real-world performance.

Blending creativity, precision engineering, and advanced manufacturing, we bring your vision to life—from small custom runs to large-scale programs—with the quality and responsiveness you expect. Your product deserves packaging that's strong, smart, and built for what's next.

Let's design that future together.
